

MIXED-USE INVENTORY MANAGEMENT

Highly customizable, user-friendly and secure solution that integrates seamlessly into hospitals and health systems

About RxStrategies

A technology and service leader since 2002. RxStrategies reduces the complexity of implementing, maintaining and optimizing 340B programs for Covered Entities of all types.

Compliance

RxStrategies prioritizes 340B program compliance, offering complimentary on-site audit support, and an integrated self-audit tool for ongoing compliance monitoring and policy adherence.

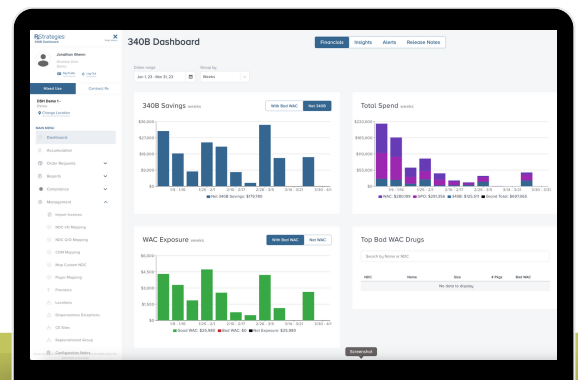

Support

RxStrategies provides Covered Entities with knowledgeable, timely and transparent communication. Our dedicated team of 340B experts are assigned to each Covered Entity, providing continuous assistance and high-touch support.

Our Solution

Simplify the process of managing mixed-use inventory virtualization and replenishment with RxStrategies. Our powerful, efficient, and feature-rich platform provides users with precise control of their mixed use program.

Intuitive, Cloud-Based Platform

The RxStrategies platform represents the cutting edge of mixed use management solutions. Through direct feedback from our clients at complex health systems, our software has evolved to meet the diverse needs of all covered entities. Our cloud based platform is remarkably efficient to use, highly customizable and effective at optimizing program performance and streamlining internal workflows.

Advanced Management Tools

Data exceptions reporting provides insights into program integrity and enhances savings capture

Native self-audit tool facilitates a straightforward and efficient self audit program

Price file reconciliation verifies pricing accuracy

Crosswalk management tools provide multiple layers of mapping workflows to support any crosswalk scenario

Multi Facility support allows health systems to more effectively manage their program across all facilities

User management allows users to be assigned access specific to their role and location

Alerts messaging engine generates email alerts to notify users and RxStrategies support if an issue arises

Enhanced Ordering Workflows

Improve labor and process efficiencies with a streamlined order review workflow that presents the end user with optimization options for each order. Enhanced savings logic analyzes the possibility of utilizing alternative NDCs for cost savings. Low price logic automatically splits items to the lowest price across accounts to maximize savings and preserve 340B accumulations when possible.

Reporting and Analytics

Robust and customized reporting and analytics capability provide users with detailed and insightful visibility into daily, weekly and monthly program activity. All data elements can easily be exported from the platform.

Streamlined Implementation

Our implementation team is accurate and efficient. With extensive expertise in analyzing and processing various data types, we offer guidance in creating customized business logic, policies, and procedures tailored to your Covered Entity's unique requirements. We facilitate an easy transition from other vendors by utilizing current accumulations, crosswalks and blocks to minimize the covered entity's efforts.
